Key Ingredients	Claims to be formaldehyde free, but can not be shipped to or sold in CA	Probiotic and enzyme based Claims to be formaldehyde & bronopol free	Purified Water, Molasses, Lactobacillus casei, Lactobacillus plantarum, Lactobacillus delbruekii, Saccharomyces cerevisiae, Rhodopseudomonas palustris	Contains sodium chloride, sodium percarbonate, citrus additive, color Claims to be formaldehyde pesticides, & biocides free	Enzyme based Claims to be chemical-free and safe for use in all states (even California)	Bacteria and enzyme based with added lavender deodorizer Claims to be formaldehyde and chemical free	2% Chlorine Dioxide (Bleach)	Pine-Sol, Calgon Bath Beads, Water
Rationale	High upfront and per use cost, can not be shipped or sold in CA. Concern for what is in the product.	Very expensive on a per use cost, if selected I would recommend the liquid based product as powders if not mixed properly can create sludge in the tanks	Overall this is the best product on the list. It is 100% natural only has Purified Water, Molasses, and beneficial bacteria cultures. It is also on the lower end of the unit and per use cost.	Though this products price point is on the low side and I don't have issues with the ingredients they are Pod style product and the plastic Pods do not always dissolve and cause blockages and clogs particularly with macerating pumps.	Very expensive on the upfront and per use cost, it is a Tablet based delivery method and is safe for use in CA	This is the highest priced product in the comparison and as you go up in the amount of product needed to treat the system based on the number of occupants the price point exponentially increases to just of \$4.00 per treatment.	This is a chemical based product that uses Chlorine Dioxide (Bleach). It will kill off any and all beneficial bacteria in your holding tanks.	Pine-Sol is a disinfectant cleaner and claims to kill 99.9% of germs and bacteria. This includes the beneficial bacteria we want in our holding tanks.
